LANGUAGES

Arabic
English
French

LANGAGES

C C++ Python
JavaScript TypeScript
Java

WEB & FRAMEWORKS

React Django Fastify
Spring Boot NestJS

DATABASES

PostgreSQL MongoDB
MySQL

TOOLS & TECHNOLOGIES

Docker Git Nginx Redis
RabbitMQ Linux TCP/IP

PROFILE

Software engineering student at 1337 (École 42 / UM6P network). Passionate about backend and fullstack development, API design and high-performance web applications. Proficient in React, Spring Boot, Fastify, PostgreSQL and Docker. Seeking an internship or junior position in backend / fullstack development.

EDUCATION

- 1337 Coding School — École 42 Network 1337 / U M 6 P
2023 — PRESENT
Intensive peer-to-peer, project-based software engineering program focused on system programming, algorithms, networking and infrastructure.
- Python Developer Certificate — OFPPT, Morocco
2021 — 2022
Fundamental Python programming, data structures and practical application development.
- Specialized IT Network Technician — OFPPT, Morocco
2020 — 2021
Network infrastructure, administration, routing, troubleshooting and security fundamentals.

PROJECTS & EXPERIENCE

ZetaSpace.net zetaspacespace.net

Full-stack platform for math courses, exams and live tests. React, Fastify, PostgreSQL, Docker, Nginx.

REACT FASTIFY POSTGRESQL DOCKER NGINX

GymAdmin gymadmin.ma

Web application for managing gym members and subscriptions. React, Spring Boot, PostgreSQL, Docker, Nginx.

REACT SPRING BOOT POSTGRESQL DOCKER

ft_transcendence

Microservices-based platform featuring Pong, typing games, chat, tournaments, notifications, and multi-language support. Built with React, Fastify, Redis, RabbitMQ, and Nginx. Fully containerized with Docker.

REACT FASTIFY REDIS RABBITMQ DOCKER MICROSERVICES

C++ Web Server

HTTP server built from scratch inspired by Nginx (sockets, parsing, multithreading). Unix shell with pipes, redirections and signals. The most advanced project in the 1337 common core.

C C++ UNIX HTTP SOCKETS PROCESS

Cub3D C

3D map and player rendering using only the C programming language and the raycasting algorithm.

C

Minishell C

Built a functional Unix shell implementing core features including command execution, environment variable management, pipes, input/output redirections, and signal handling. Deepened understanding of process management, file descriptors, and system calls in Unix-like operating systems.

C UNIX PROCESS
